

Inserting Widgets into Moodle

There are a couple things you need to do before inserting widgets into your course (this is only for these widgets and only has to be done in 2.1 – 1.9 works fine the regular embedding way).

1. Open up your Moodle course
2. Click on “My Profile Settings”
3. Click “Edit Profile”

4. Where it says “When editing text” click on the dropdown arrow and choose “use standard web forms”

5. Click UPDATE PROFILE at the bottom
- ⌚ Go into the section where you want to insert the widget
- ⌚ You can insert a LABEL to keep your widgets separate and easier to edit and/or delete
- ⌚ You will notice that you do not have the WYSIWIG editor just an empty box

- ⌚ From the dropdown menu underneath the box select “Moodle Auto Format”

- ⌚ Now go to the Wolfram Alpha widget site to copy the embed code of the widget you want to bring over (*don't close your Moodle page or click save on the Label yet – you will want this site and the widget site open at the same time*)

Wolfram Alpha Widgets

- ⌚ Go to: <http://www.wolframalpha.com/widgets/gallery/>
- ⌚ Choose which widget you want to embed into your Moodle course
- ⌚ Make any changes (theme, output type and output width) to the widget BEFORE you copy the embed code

- ⌚ Right Click on the embed code and click on COPY
- ⌚ **GO BACK TO YOUR MOODLE PAGE**
- ⌚ Right click in the empty box and click PASTE

- ⌚ You will now see the code in the box
- ⌚ Click "SAVE AND RETURN TO COURSE"
- ⌚ The widget should now appear in the section where you placed it.

You can then set your profile BACK to "USE HTML EDITOR" so that the WYSIWIG editor

will appear again.

You can also add widgets to your blocks on the left and right hand side of your Moodle course.

- ⌚ Click on Add under “Add a block” and click on HTML
- ⌚ Click the hand and pencil icon to edit the block

- ⌚ Right click and PASTE your code into the empty box
- ⌚ Give the Block a title (optional)
- ⌚ Make sure the drop down below the box is set to “Moodle Auto-format”
- ⌚ Click SAVE CHANGES when finished

Block title

Content

```
<script type="text/javascript" id="WolframAlphaScript1103f69078a4efe0f95493783becf67c" src="http://www.wolframalpha.com/widget/widget.jsp?id=1103f69078a4efe0f95493783becf67c"></script>
```

Moodle auto-format

NOTE: If you are moving an ENTIRE section with a widget embedded into it you will notice it separate when moved – to fix this simply REFRESH the page and it will adjust itself.

Also, you cannot add the exact same widget into a block and into a section of your course – it has to be one or the other. To make it easier to edit or delete widgets simply add a new HTML block for each widget that you want to have on your course page.
